by Laura Gallagher October 31, 2016. Happy pumpkin day! In the Weight and Mass Gizmo, students can find the weight and mass of a pumpkin—and many other objects—using a balance to measure mass and a spring scale to measure weight. These measurements can be compared on different planets to establish the idea that weight is a force equal to the gravitational force on an object at a given location, while mass is an intrinsic property that does not vary by location.

Weight and Mass - TrackStar

Define mass as the amount of matter in an object.
Define weight as the force of gravity on an object. Use a balance to measure mass. Use a spring scale to measure weight. Discover that the weight of an object changes when it is moved to another planet. Discover

that the mass of an object is constant regardless of where it is located. VOCABULARY:

Weight And Mass Determining A Spring Constant Gizmo

Use a balance to measure mass and a spring scale to measure the weight of objects. Compare the masses and weights of objects on Earth, Mars, Jupiter, and the Moon. Access to ALL Gizmo lesson materials, including answer keys. Customizable versions of all lesson materials.

Weight and Mass Gizmo. STUDY. Flashcards. Learn. Write. Spell. Test. PLAY. Match. Gravity. Created by. Brinkx37. Terms in this set (5) Based on the images below, what is the mass of the flowerpot? (Masses are labeled in kilograms.) B. between 4 kg and 5 kg. What is the weight of the turkey? C. 71 newtons.

Student Exploration: Weight and Mass (ANSWER KEY)

Estimate the strength of gravity on each location by dividing the weight of the 5-kg mass by 5. Calculate: First measure the mass of the flowerpot in the Gizmo. Then predict the weight of the flowerpot on each planet (multiply the mass by that planet's strength of gravity).

Add 1-kg masses to the left pan until it goes down. Then take one of the 1-kg masses off the pan so that the masses are above the dog. Use this process of adding and subtracting other masses from the left pan until the two pans are balanced. Add up all the masses on the left pan. This is equal to the mass of the dog.

How would your mass on the Moon compare to your mass on Earth? Highlight your answer. Gizmo Warm-up On the Weight and Mass Gizmo, you can use a balance to compare the masses of objects. 1. Place the dog on the right pan of the balance. What happens? 2. Place the 5-kilogram (kg) mass on the other pan. Which has more mass, the dog or the 5-kg mass? 3. The 5-kg mass is heavier than the dog, so take it off the pan and place a 1-kg mass on the pan. Add 1-kg
